O&M Plan Checklist and Certification for Regulated Projects

A. Designate the Responsible Individual (RI).

The RI is the person that will have direct responsibility for the maintenance of storm water controls, maintain self-inspection records, and sign any correspondence with the PBS departments with project location jurisdiction.

Name of RI: __________________________________________

Phone: __________________________________________

Project Name: __________________________________________

Physical Site Address and/or APN: __________________________________________

☐ Include the site plan delineating the DMAs and the locations of the bioretention or equivalent facilities.

☐ Include the final construction drawings of the storm water facilities:
  □ Plans, elevations, and details of bioretention facilities.
  □ Construction details and specifications, including: depths of sand and soil, compaction, pipe materials, and bedding.
  □ Location and layouts of inflow piping and piping to off-site discharge
  □ Native soils (lenses beneath the facilities)

B. Scheduled Maintenance Activities

The following activities will need to occur on an annual basis, frequency may need to be adjusted depending on facility.

- **Refuse removal**, remove trash that collects near the inlets or that is trapped by vegetation. Clean out soil and debris blocking inlets or overflows.
- **Control weeds**, manual methods and soil amendments; non-natural (synthetic) pesticides should not be used.
- **Add mulch**, add mulch to maintain a mulch layer thickness of ~ 3 inches.
- **Pruning and replanting vegetation**, it may be necessary to replace or remove vegetation to ensure the proper functioning of the facility.
- **Check irrigation**, if irrigation exists, check to make sure the system is working as intended.

An annual self-certification letter will be mailed to the RI. This letter will serve as verification that all the storm water facilities on the property are being maintained and remain operational. The letter should be signed and returned within 30 days.
C. Updates to the O & M Plan

Contact information for the Responsible Individual should be current. If the RI changes, the PBS departments with project location jurisdiction should be notified with the appropriate revisions.

D. O & M plans for other Facility Types

If your project included a non-standard storm water treatment facility that was approved by the Planning and Building Services Department, such as a tree-box type system, than the O & M should reflect the manufacturer’s recommended maintenance scheduling.

E. Signature and Certification:

“I, the RI/applicant accept responsibility for operation and maintenance of storm water treatment and flow-control facilities until such time as this responsibility is transferred to a subsequent owner.” Furthermore, a condition on the property deed will be recorded with the County Recorder’s office indicating that a storm water facility is present on the property and that the maintenance responsibility will transfer with property ownership in perpetuity.

Signature of the RI ______________________________ Date ______________________

Print Name ____________________________________________

I am the:

☐ Property Owner

☐ Applicant

☐ Contractor
